Psychology: Concepts and Applications Jeffrey S. Nevid 2012-01-01 PSYCHOLOGY: CONCEPTS AND APPLICATIONS, Fourth Edition, offers a concept-based approach supported by a unique pedagogical framework. Author Jeff Nevid provides a broad view of psychology that includes history, major theories, research methods, and important research findings as well as applications of contemporary research to the problems and challenges faced in everyday life. Nevid developed the effective teaching devices in this text based on a comprehensive system derived from research on learning and memory as well as his own research on textbook pedagogy. The text's successful modular format organizes each chapter into manageable instructional units that help students focus on one topic at a time within the context of a larger chapter structure. The material also incorporates four goals that Nevid refers to as the Four E's of Effective Learning: Engaging Student Interest, Encoding Information, Elaborating Meaning, and Evaluating Progress. In the Fourth Edition, Nevid employs a new IDEA Model of Course Assessment--unique to this text--which

maps specific learning goals (tied to APA goals) to measurable skills students acquire in their first exposure to psychology. Executed throughout each chapter, the model presents learning objectives that are expressed in the form of active learning verbs, and linked to measurable learning outcomes. The model is integrated with the test-item file, making it easy for instructors to select items measuring these particular outcomes. Biology Sylvia S. Mader, Dr. 2015-01-05 THE MADER/WINDELSPECHT STORY... The twelfth edition of Biology is a traditional, comprehensive introductory biology textbook, with coverage from Cell Structure and Function to the Conservation of Biodiversity. The book, which centers on the evolution and diversity of organisms, is appropriate for any one- or two-semester biology course. Biology, 12th Edition is the epitome of Sylvia Mader's expertise. Its concise, precise writing-style employs lucid language to present the material as succinctly as possible, enabling students—even non-majors—to master the foundational concepts before coming to class. “Before You Begin”, “Following the Themes”, and “Thematic Feature Readings” piece together the three major themes of the text—evolution, nature of science, and biological systems. Students are consistently engaged in these themes, revealing the interconnectedness of the major topics in biology. Sylvia Mader typifies an icon of science education. Her dedication to her students, coupled with her clear, concise writing-style has benefited the education of thousands of students over the past three decades. The integration of the text and digital world has been achieved with the addition of Dr. Michael

Windelspecht's facility for the development of digital learning assets. For over ten years, Michael served as the Introductory Biology Coordinator at Appalachian State University—a program that enrolls over 4,500 non-science majors annually. Michael is the lead architect in the design of McGraw-Hill's Connect Plus and LearnSmart media content for the Mader series. These assets allow instructors to easily design interactive tutorial materials, enhance presentations in both online and traditional environments, and assess the learning objectives and outcomes of the course.

McDonnell 2017-10-02 Antisepsis, Disinfection, and Sterilization: Types, Action, and Resistance, by Gerald E. McDonnell, is a detailed and accessible presentation of the current methods of microbial control. Each major category, such as physical disinfection methods, is given a chapter, in which theory, spectrum of activity, advantages, disadvantages, and modes of action of the methods are thoroughly and clearly presented. Sufficient background on the life cycles and general anatomy of microorganisms is provided so that the reader who is new to microbiology will better appreciate how physical and chemical biocides work their magic on microbes. Other topics in the book

include: Evaluating the efficacy of chemical antiseptics and disinfectants, and of physical methods of microbial control and sterilization. Understanding how to choose the proper biocidal product and process for specific applications. Classic physical and chemical disinfection methods, such as heat, cold, non-ionizing radiation, acids, oxidizing agents, and metals. Newer chemical disinfectants, including, isothiazolones, micro-and nano-particles, and bacteriophages as control agents. Antisepsis of skin and wounds and the biocides that can be used as antiseptics. Classic methods of physical sterilization, such as, moist heat and dry heat sterilization, ionizing radiation, and filtration, along with newer methods, including, the use of plasma or pulsed light. Chemical sterilization methods that use ethylene oxide, formaldehyde, or a variety of other oxidizing agents. A detailed look at the modes of action of biocides in controlling microbial growth and disrupting microbial physiology. Mechanisms that microorganisms use to resist the effects of biocides. The second edition of *Antisepsis, Disinfection, and Sterilization: Types, Action, and Resistance* is well suited as a textbook and is outstanding as a reference book for facilities managers and application engineers in manufacturing plants, hospitals, and food

production facilities. It is also essential for public health officials, healthcare professionals, and infection control practitioners.

Biochemistry Donald Voet 2021-05-20 The "Gold Standard" in Biochemistry text books. Biochemistry 4e, is a modern classic that has been thoroughly revised. Don and Judy Voet explain biochemical concepts while offering a unified presentation of life and its variation through evolution. It incorporates both classical and current research to illustrate the historical source of much of our biochemical knowledge.
