Basic Knowledge of Pharmacology Roland Seifert 2019-07-19 This is the perfect pharmacology textbook for medical and pharmacy students. The book was developed on the +30-year experience of the author as pharmacology professor in the United States and Germany. The book discusses the most important drugs (400) in the context of relevant diseases. Summary tables and schemes, MCQ exam questions, case studies and a list of drugs aid memorization of the material before an exam. All chapters are written in the same concise style and use a modern and precise pharmacological nomenclature. After reading of the book, the student will be able to critically assess the proper use of the most important drugs and advise patients properly. The didactic concept of the book has been developed on the author's own pharmacology courses for which he has received numerous teaching awards. The book takes advantage of the learning spiral, in which material is presented repeatedly from various angles. This book is an adaptation for an international audience of the German textbook "Basiswissen Pharmakologie" (2018); ISBN: 978-3-662-56303-8.

Instant Pharmacology Kourosh Saeb-Parsy 1999-06-18 Written by students, for students, Instant Pharmacology represents a novel approach to the study of pharmacology and provides an accessible and exhaustive, yet concise account of pharmacology. The book first introduces readers to the basic principles of pharmacodynamics and pharmacokinetics, which are obviously essential for understanding the action of all drugs, and it is subsequently divided into four parts. * Part One covers the main chemical transmitters which mediate all bodily processes and are the site of much pharmacological intervention. * A systematic account of the pharmacological treatment of major clinical conditions is presented in Part Two, where emphasis is placed primarily on the principles upon which therapy is based, rather than overshadowing these principles with detailed features of individual drugs. * Part Three comprises a Dictionary of Drugs, alphabetically listing all the drugs encountered in Parts One and Two. Entries in the dictionary describe in detail the clinical uses, mechanisms of action, pharmacokinetics and the main adverse effects of a specific agent. * Finally, to allow readers to evaluate their own progress in the subject, Part Four is a self assessment section, including multiple choice questions (with answers) covering all the topics in Instant Pharmacology. Instant Pharmacology will make the study of pharmacology a more rewarding and enjoyable process, and is essential reading for all undergraduate students of pharmacology, pharmacy and related courses, as well as preclinical medical and dental students.

Contrast Media in Practice Peter Dawson 2012-12-06 In this small volume experts provide succinct answers to frequently asked questions about the properties and handling of X-ray contrast media. It is an excellent reference source for all using these agents. Basic information is given on the development, toxicology, pharmacology, pharmacokinetics and clinical testing of contrast agents and in question and answer form on the problems and adverse events which may be associated with them. Most of the book is concerned with the most frequently used iodinated X-ray agents but there are useful sections on the magnetic resonance and ultrasound echo enhancing agents which are assuming greater and increasing importance. This book will be of interest to both radiologists and clinicians.
